DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 29, 2007 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 22 and 25-35 are rejected under 35 U.S.C. 102(e) as being anticipated by Wallace et al. (6,322,576). With respect to claim 22, Wallace et al. disclose, at least in figure 12 and in col. 5, lines 5-56; at least one strand of flexible material formed to have a first portion with a first inoperable, substantially linear configuration and a second operable, three dimensional substantially cube-shaped orthogonal configuration, where the device further includes a second portion including a plurality of helical loops and

having a first inoperable, substantially linear configuration and a second operable, elongated configuration with a substantially helical coil shape with the plurality of helical loops (two loops) extending outwardly from a corner of the first portion in its second configuration (see the coil shape at the upper left-hand side of figure 12, i.e., as cross-hatched in attachment (1)). With respect to claims 25-34, col. 5, lines 9-40 disclose that the at least one strand or wire is formed from the alloys or radiopaque, flexible materials as claimed. With respect to claim 35, col. 6, line 62 to col. 7, line 17 further disclose that the strand of flexible material is formed into a helical shape, which is the form of the first inoperable, substantially linear configuration of the strand.

Response to Amendment

4. Applicant's arguments with respect to claims 22 and 25-35 have been considered but are moot in view of the new ground(s) of rejection.
